We are also pleased to inform that 2024 was yet another great year for [Axtria](#), and the growth that we have had has been quite sustainable. That's what's allowing us to aggressively hire for 2026 as well and our appetite for campus hires is even more than 2025. The domain in which Axtria operates [Life Sciences] is allowing us to keep designing solutions around IT services/product/consulting. Moreover, there is enhanced focus on **AI and Data Science** as well.

As is the core strength of Axtria, what matters is sheer **fundamentals which are well intact**. As a result, we stay on to be sustainable rather than exponential, and aggressive instead of being adventurous.
